Subject: RE: Proposition 65 Warning

Ruben –

The questions are related to adding the Prop 65 warning to glyphosate product labels. Dave Lawson from WPHA met with Assistant Director Marylou Verder-Carlos today and told her that they are “mocking up a “warning” statement on behalf of their members that they plan to present to OEHHHA for “approval.” After that they will be submitting amended product labels to your Agency and DPR. On a different, but related issue, WPHA asked if DPR would allow the warning to be placed on product labels via a sticker. I’m checking with our Enforcement Branch, but adding a label change for a short time via a sticker placed on the can at a U.S. EPA establishment is something we have allowed in the past.

Thank you

Ann

Hi Ann,

Are here for Glyphosate products or any other product? The official position for both our Agencies is being developed as you are aware but is not final....I’m getting a number of calls and emails on this matter but it’s largely focused on glyphosate.

Let’s try to connect tomorrow and find a workable solution in the mean time.

Thanks

Reuben

Dear Ruben –

We are receiving numerous calls from registrants asking if your Agency will accept the addition of the Proposition 65 warning statements on registered pesticide product labels by notification.

How would you like us to respond to these requests? Currently, I am having staff tell the company that they need to call your Agency. However, if you have a position on this issue (notification vs. amendment), it might be easier if my staff were to just

answer the question, and save your Agency all the calls.

Please let me know.

Sincerely,

Ann

Ann. M. Prichard, Chief

Pesticide Registration Branch

California Department of Pesticide Regulation
